

PRESS RELEASE (For Immediate Release)

TallApplications integrates Data Collection into PDF/Mergician

New levels of advanced mail merging and data collection using PDF forms

(December 8, 2006) – TallApplications, a leading provider of creative PDF solutions, announced today the release of PDF/Mergician 2.3, an easy to use application for generating advanced mail merges using PDF forms.

With PDF/Mergician 2.3 you can now pre-fill and distribute personalized PDF forms and collect filled-out forms. The entire form round-trip integrates with all major databases.

PDF/Mergician enables you to create personalized mailings, pre-filled forms and reports using PDF forms as templates and supports advanced mail merge scenarios. With PDF/Mergician, you can import data from any database, apply master/details relations to documents, and distribute the results. Filled-out PDF forms can be collected. Submitted forms can trigger various actions. PDF/Mergician can be run as an end user application, unattended (such as part of a nightly batch), or as web service.

Version 2.3 also brings many other exiting features to PDF/Mergician such as print production support with advanced color models, improved useability and much more.

PDF/Mergician 2.3 is compatible with project files created in earlier versions of PDF/Mergician and runs on Windows 2000, Windows XP, Windows Server 2003 or Windows Vista.

PDF/Mergician 2.3 is available now. A free trial version of PDF/Mergician can be downloaded from www.tallapplications.com.
